

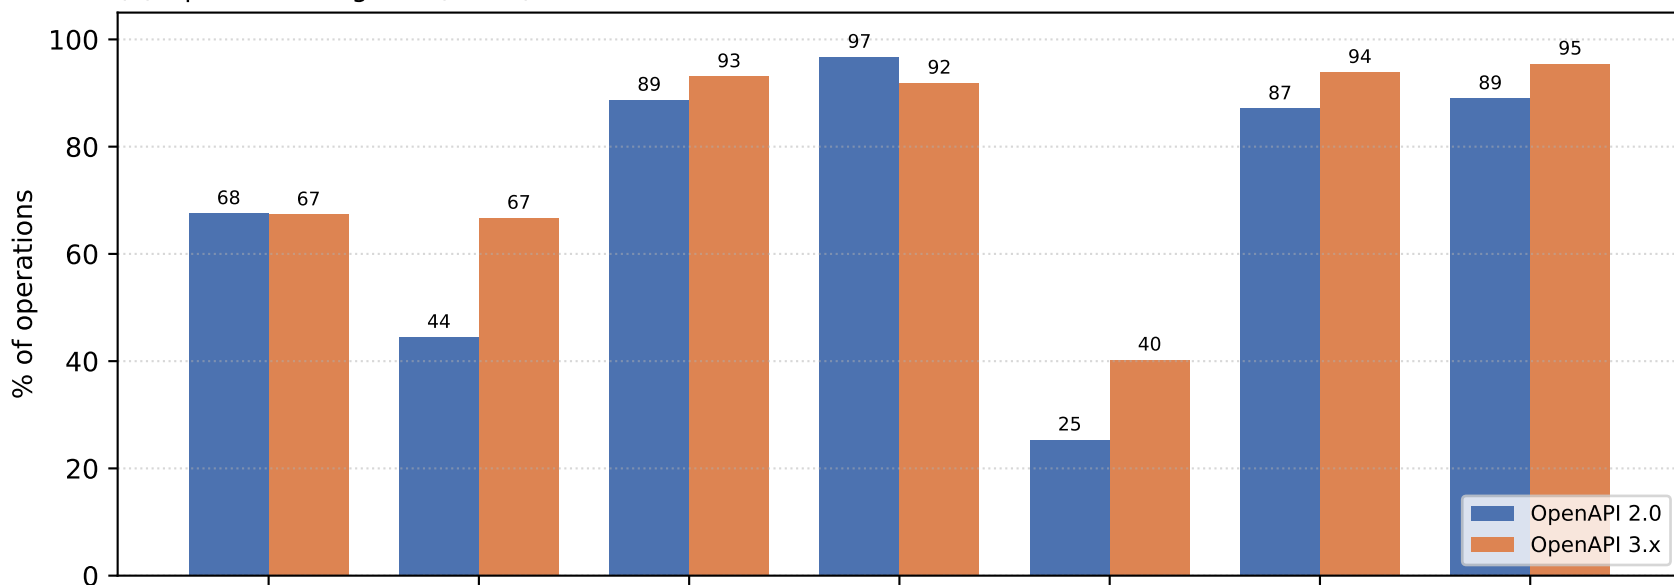

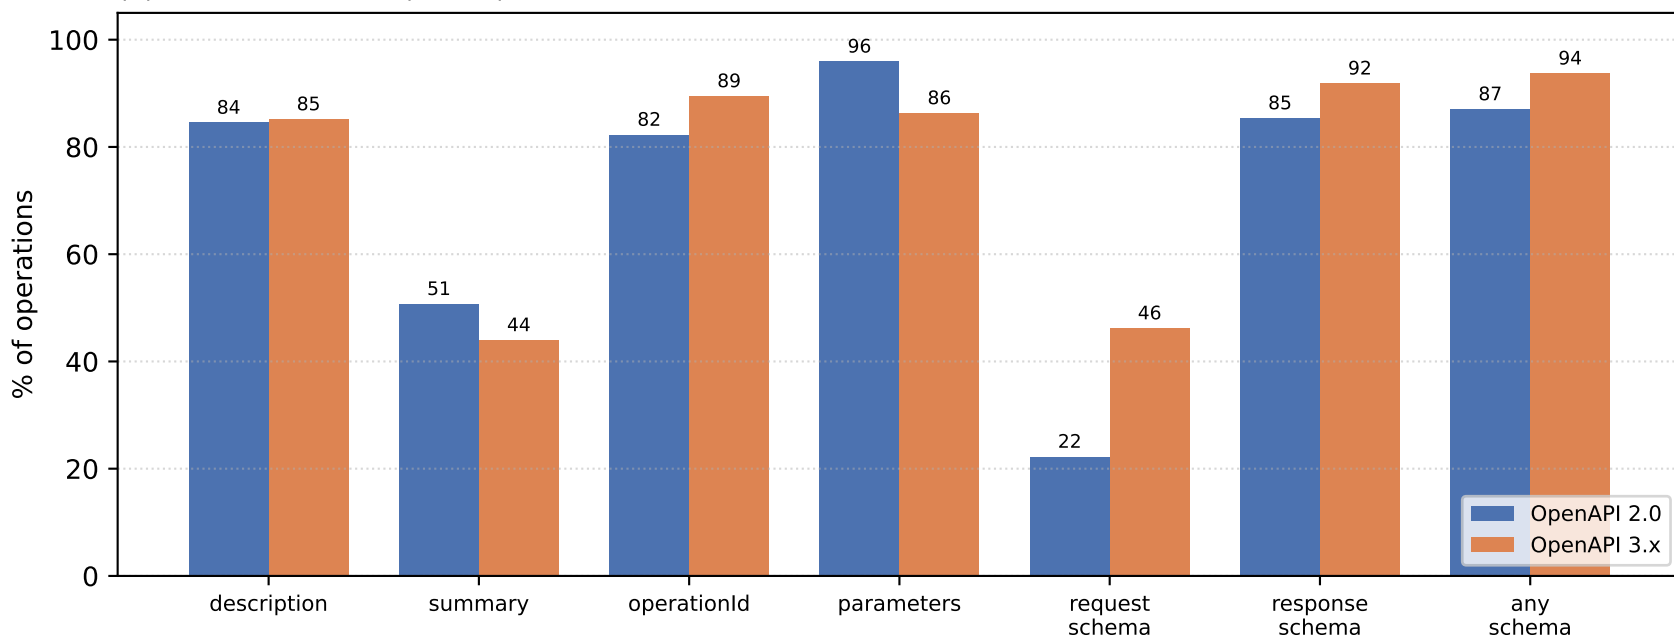

Fig 1 — Field availability across specs/clean (n=1831 services, 114,358 operations)

(a) Operation-weighted (micro)

(b) Per-service mean (macro)

Admin endpoints excluded (matching src/filter.py). request_schema shown over ALL operations for cross-field comparability; the primary documentation-completeness rate uses the body-eligible (POST/PUT/PATCH) denominator and is reported in results/availability_summary.csv. any_schema = carries a request OR response schema (schema presence, descriptive; NOT mask feature f5 -- see D-08 and src/pair_availability.py).
